

PARIT VORASARAN

Cyber Security Analyst | Application Security | DevSecOps

Melbourne, Victoria, Australia | 412 096 050 | vorasaran.parit@gmail.com | <https://github.com/ParitV>

PROFESSIONAL SUMMARY

Aspiring cyber security professional entering the industry with a Master of Cyber Security from Monash University and over 3 years of professional experience across software engineering and technical support. Hands-on experience across application security, DevSecOps automation and SOC detection engineering, built through live penetration testing, CI/CD security pipelines and SIEM investigations. Currently completing CompTIA Security+ and CySA+ and looking to bring a builder's mindset to an Application Security or DevSecOps team, with openness to broader cyber security roles.

CERTIFICATIONS (IN PROGRESS)

CompTIA Security+ | CompTIA CySA+ | THM DevSecOps

CORE SKILLS

Security Tools & Testing: Burp Suite, Nmap, Nikto, Nuclei, testssl.sh, sqlmap, CodeQL, Semgrep, OWASP ZAP, CodeRabbit (SAST), Vulnerability Assessment & Remediation

Application & DevSecOps: SAST/DAST Pipeline Design | CI/CD Security Gates (GitHub Actions) | Penetration Testing | IDOR / CORS / Auth Vulnerability Analysis | Secure Code Review

SOC & Detection: SIEM (Wazuh) | Sysmon Telemetry | MITRE ATT&CK Simulation | Custom Detection Rule Authoring | Log Analysis

Technical Support: Incident Triage & Escalation | Root-Cause Analysis | Ticketing & Case Management | Remote Troubleshooting | Client-Facing Support | Technical Documentation

Systems & Infrastructure: Windows/Web Application Support | AWS (Lambda, API Gateway, RDS, CloudWatch, ECR) | System Administration | Website & Hosting Maintenance | CI/CD (GitHub Actions)

Software & Scripting: Python | C# / .NET | JavaScript / TypeScript | React.js | SQL | REST APIs | HTML | CSS

Security Awareness: OWASP Top 10 | Vulnerability Assessment | Secure Configuration | Australian Privacy Act 1988 / APPs | Data Protection

Communication: Technical to Non-Technical Translation | Stakeholder Communication | Cross-Functional Collaboration | English, Thai (native); Mandarin, Japanese (conversational basics)

FEATURED PROJECT EXPERIENCE

Personal Portfolio website: <https://parit-vorasaran-portfolio.com>

Application Security Engineer & Full-Stack Developer | NeuroGuide Industry Project | Monash University

2026 | Melbourne, AU

- Authored the application's Security Plan using CIA triad and privacy-by-design principles covering authentication, encryption, logging and data protection controls
- Conducted 3 iterations of grey-box penetration testing across a live AWS, FastAPI and React production environment, identifying and remediating IDOR exploit chains, exposed credentials and CORS misconfigurations
- Automated security analysis workflows with Python and CodeRabbit SAST tooling across frontend and backend repos, producing prioritized remediation guidance for developers
- Owned the CI/CD pipeline via GitHub Actions and built the AWS serverless backend (Lambda, API Gateway, RDS, CloudWatch, ECR) supporting the application's security controls

Repo: github.com/pvor0002/NeuroGuide TP19

Eight | GitHub Actions SAST/DAST Security Pipeline | Personal Project

2026 | Melbourne, AU | For in depth detail please see the README on my repo

- Built a reusable GitHub Actions pipeline combining CodeQL and Semgrep (SAST) with OWASP ZAP (DAST) against a live running app, covering both source-level and black-box attacker analysis in one workflow
- Wrote a Python aggregation script that merges all three tools' findings into a single PR report and automatically fails the build when a High or Critical severity issue is found
- Packaged the logic as a reusable composite GitHub Action so any repository can adopt it with one workflow file and three configuration edits, without rebuilding the pipeline from scratch
- Validated the pipeline end to end against an intentionally vulnerable demo application, confirming accurate detection of planted vulnerabilities before release

Repo: github.com/ParitV/Eight

SOC/SIEM Detection Lab | Home Lab Project

2026 | Melbourne, AU | For in depth detail please see the README on my repo

- Built an isolated home SOC lab across Windows and Kali Linux VMs with a Dockerized Wazuh SIEM and Sysmon endpoint telemetry to simulate realistic attacker behavior
- Simulated 4 MITRE ATT&CK techniques including brute-force login, malicious PowerShell execution, local account manipulation and LSASS credential dumping, documenting each as a full investigation write-up
- Key finding: identified a real detection gap in Wazuh's built-in LSASS credential dumping rule caused by an outdated access-mask allowlist, then closed it by writing and validating 2 custom detection rules against live attack traffic

Repo: github.com/ParitV/soc-siem-detection-lab

PROFESSIONAL EXPERIENCE

Technical Support Engineer (Remote) | Insider

Aug 2024 – Feb 2026 | Bangkok, Thailand

- Diagnosed, reproduced and resolved application-layer issues across HTML, CSS and JavaScript, maintaining hands-on involvement with front-end development while working in a technical support role
- Developed and applied front-end solutions to investigate and resolve production issues, giving practical experience with how web applications behave in real-world environments
- Investigated complex and escalated technical issues through root-cause analysis and collaborated with internal engineering teams and external stakeholders to develop solutions
- Translated client-reported problems and requirements into clear technical information for developers, then communicated technical root causes and remediation steps back to non-technical clients
- Maintained detailed technical documentation covering investigations, resolutions and escalations

Data Accuracy Team | Insider

Dec 2023 – Aug 2024 | Bangkok, Thailand

- Investigated data discrepancies and anomalies across systems, identifying root causes and maintaining data integrity and consistency for client-facing products
- Applied analytical and investigative skills to support reliable, accurate handling of system data

Technical Support Specialist | Insider

Feb 2023 – Aug 2024 | Bangkok, Thailand

- Provided direct technical support to clients, translating client-reported issues into structured technical detail and following escalation procedures for cases with potential security or compliance implications
- Developed customized solutions using HTML, CSS and JavaScript to resolve specific client and user requirements

Full Stack Developer | INF Systems & Engineering

May 2022 – Feb 2023

- Developed, enhanced and maintained full-stack web applications and RESTful integration services using Java, C# and JavaScript, and SQL within an Agile development setup
- Built and enhanced REST API functionality to support frontend workflows, backend business logic and data exchange between application components

- Developed React-based user-interface components and integrated them with backend API services and SQL-backed application data
- Implemented new functionality across frontend and backend layers, translating business or technical requirements into maintainable application features
- Investigated, diagnosed and resolved defects across React UI, .NET backend services, REST APIs and SQL data operations

Software Development Intern | Move On Solution

Jun 2021 – Oct 2021

- Contributed to the design and development of desktop applications using SQL, C# and the .NET Framework

EDUCATION

Master of Cyber Security | Monash University | Melbourne, Australia

Jul 2024 – Jul 2026

- Industry Experience Project: Full-stack developer and security engineer responsible for the application Security Plan, penetration testing, vulnerability identification, remediation and verification

Bachelor of Digital Engineering, First Class Honours | Thai-Nichi Institute of Technology

Feb 2018 – Mar 2022

- Relevant coursework: Data Structures | Algorithms | Computer Systems | Machine Learning | Industrial Robotics | IoT | Web & Application Development | Cloud Computing | Wireless Communication
